**STANLEY SARGENT AND GREENLEAF GOES “ABOVE AND BEYOND” WITH A
NEW MECHANICAL SAFE LOCK**

***S&G® Model 2937 Mechanical Safe Lock Advances Security with the Only Lock to Meet
New Federal Specification FF-L-2937***

Indianapolis, IN – August 13, 2007 – Designed to address the complex security needs in the Government market, which imposes the strictest standards for mechanical combination locks, Sargent and Greenleaf (S&G), a subsidiary of Stanley Security Solutions, Inc., today introduced the Model 2937 Mechanical Safe Lock. With its introduction, the S&G® Model 2937 is the only safe lock tested that successfully meets the United States Federal Specification FF-L-2937. The S&G® 2937 is required by GSA to secure field safes (AA-F-358H), weapon containers (AA-C-2859) and weapon vault doors (AA-D-600D) that currently call for a UL® 768 Group 1 lock.

Based on the time-tested S&G® 8500 series lock platform, the S&G® Model 2937 features - rugged construction, advanced security, ease of use and ease of installation. The S&G® Model 2937's stainless steel bolt is designed to meet the tough 600lbs. of force resistance required by the federal specification. Furthermore, the bolt comes standard with drilled and tapped holes patterned to meet specification FF-L-2937. Moreover, the three all-metal wheel construction enhances its durability. The result is a lock that provides exceptional protection against a wide variety of brute force attacks and attempted breaches.

In addition, the S&G® Model 2937 offers a myriad of standard security features necessary to meet the strict federal specification. The S&G® Model 2937 includes a Spy-Proof® Dial, a security-enhancing feature that restricts the dial's viewing area to a small band of numbers at the very top. As a result, it is extremely difficult for anyone other than the operator to view numbers dialed.

Although the S&G® Model 2937 provides advanced mechanical security, it does not compromise user-friendliness, employing the standard left-right-left dialing procedure common in other S&G® 3-wheel mechanical safe locks.

Installation and retrofits are also simple with the S&G® Model 2937 as it uses S&G's "Magic Module" footprint, the de facto industry standard for case size and mounting screw location. This feature minimizes installation time and costs as there is no need for special mounting plates or boltwork modification.

There is an available model of the S&G® 2937 that includes an additional field installable stainless steel bolt to accommodate the many Mosler™ brand containers and vaults still in use. With this model, installers can be assured of having everything they need to install the lock no matter what safe they encounter.

“Throughout its 150 year history, Sargent and Greenleaf has been able to maintain its standing not only as one of the world’s largest manufacturers of high-security safe and vault locks but also as one of the most universally trusted sources for protecting the assets of banks, businesses and governments,” said Phil Pitt, marketing director for Stanley Sargent and Greenleaf. “Our mechanical safe locks in particular have set industry standards and the S&G® Model 2937 is no exception representing our continued commitment to meet the safe lock needs of the Government and help do our part in securing the nation.

Additional S&G® Model 2937 features include:

- Twenty man-hours of resistance to expert manipulation
- Built in thermal protection by an integral thermal relock component
- Key changeable wheel design for ease of combination changing -
- UL® Group 1 listing.
- Incorporates S&G’s patented, time-tested torque adjuster to allow precise setting and maintenance of wheel pack torque

About Stanley Security Solutions

Stanley Security Solutions, a business division of The Stanley Works, is a provider of integrated access control and security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.

About Sargent and Greenleaf
