### **STANLEY SECURITY SOLUTIONS LAUNCHES DURASHIELD™ HIGH SECURITY SERIES AUTOMATIC DOOR SYSTEM**

***Customizable, Blast-Resistant Doors Ideal for Locations Subject to High Risk***

**LAS VEGAS (ASIS Show) – September 24, 2007** – Stanley Access Technologies, a member of the Stanley Security Solutions Product Group and a provider of access control and integrated security solutions, today announced the release of the DuraShield™ High Security Series automatic door system, which provides outstanding performance, security and safety in facilities subject to high security risk.

The DuraShield High Security Series is a customizable, heavy-duty, blast-resistant, sliding automatic door system, an ideal security solution for buildings where automatic doors are subjected to high risk. The DuraShield High Security Series is designed to minimize structural and glass damage caused from blast or ballistic occurrences. Additional protection is provided from a proprietary framing system, the StanGuard™ threshold infrared safety motion sensor, and dual motors which signal the doors to open 50 percent faster than standard sliding door platforms. Integrated within the frame, glass and molding are bullet-resistant materials that add another layer of protection.

Compliant with anti-terrorism standards to meet stringent UFC 4-010-01 Department of Defense code requirements, the DuraShield High Security Series is designed with both solenoid and magnetic locking/latching systems to provide the end user with the protection of an electric lock, available in fail-secure and fail-safe modes. The Magnetic Latching System allows the doors to break out for emergency egress and will reset automatically with the auto closer.

The introduction of the DuraShield High Security Series of blast- and ballistic-resistant door systems is especially timely and relevant and has particular significance for military,

government and other state facilities requiring additional protection from potential terror threats that could inflict significant damage.

Other product features include:

- Dual motor drive system
- Surveillance camera/sensor
- Solenoid locking system
- Integrated alarm contacts
- Available infrared side impact sensors for redundant safety
- Easy-to-read rotary switch settings facilitate changing the door operation
- Flexibility with other security systems
- Magnetic latching system
- Bullet- and blast-resistant framing and glazing
- Available in swing-door applications

“The DuraShield High Security Series is a suite of durable, dynamic and highly efficient access systems that represent components of our integrated security solutions strategy, designed to keep people safe and secure and assets and information protected across the entire security spectrum,” said Thom Cordeiro, Product Manager, Stanley Access Technologies.

### **About Stanley Security Solutions**

Stanley Security Solutions, a business division of The Stanley Works, is a provider of access control and integrated security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.
