Vandal-resistant mortise locks

-- 9/1/2008

These mortise locks are available with a vandal-resistant feature that includes a clutch mechanism designed to break away when excessive force (in excess of 15 foot-pounds of torque) is applied either by kicking or standing on the lever. Once the lever for the Best Access Systems 40H Series mortise lock breaks away it can be easily reset to its original horizontal position without sustaining damage.
