STANLEY SECURITY SOLUTIONS ANNOUNCES SIGNIFICANT CONTRACT WIN WITH COLORADO SPRINGS UTILITY

***Deal Encompasses Comprehensive Design and Build Security Solution For
Unified Network of Utility and Energy Installations Throughout Municipality***

Indianapolis, IN – October 31, 2005 – Stanley Security Solutions, a provider of access control and security solutions, announced today that it has won a comprehensive security “design-build” contract called the Enterprise Wide Security Enhancements project with the city of Colorado Springs, Colorado. The exclusive three year contract calls for Stanley Security Solutions to design, develop, install and service a suite of integrated access control and security solutions for Colorado Spring’s merged network of utility and energy installations throughout the city.

The substantial project scope encompasses the city’s entire energy infrastructure including office/warehouse facilities, waste water facilities, electric transmission and distribution sites as well as its electric and gas plants. Specific security components include access control, closed-circuit television (CCTV), digital video recording, networking & fiber optics, credential management/photo ID systems, electronic door hardware and perimeter site protection including fencing, outdoor sensors, and photoelectric beams.

“The city of Colorado Springs merged what was once a separate and independent set of utilities and so required a unified and integrated security system,” said Mark Meisen, manager of business development for Stanley Security Solutions. “With this installation, Stanley Security Solutions is providing an extremely practical and efficient system that will achieve this objective. Now its personnel are able to utilize a single brand platform for all their security systems located throughout the city, allowing staff to carry and use a single card for all access points. This makes it much easier for everyone in terms of maintenance and operations.”

Stanley Security Solutions began work with CSU on the 2003 Security Normal Additions project, which provided security for a total of 21 water treatment facilities. This project allowed Stanley Security Solutions the opportunity to bid on and ultimately win the contract for the Enterprise Wide Security Enhancements project.

Based on a vulnerability assessment conducted by the city of Colorado Springs, Stanley Security Solutions then provided an engineering and design plan for the approximately 120-150 utility facilities throughout the city. As a result, this base line specification defined the standards for operational, functional and environmental performance of all project components and the systems to be furnished and installed. This specification outlined installation, maintenance, documentation, testing and training requirements.

Upon completion, Stanley Security Solutions was awarded the subsequent phase of the design-build project, which comprises the build, installation and integration portion of the project. The Enterprise Wide Security Enhancements project specifically entails all aspects of physical security upgrades/installation, which includes not only the electronic systems but also fencing, new manual and automatic gates, and design concepts for blast mitigation for the city's hydrogen and chlorine tanks as well multiple barriers.

"Integration providers are not typically awarded the entire scope of a design build project, but rather assume and oversee only a small piece of the overall project," said George Horn, regional sales manager for Stanley Security Solutions. "Wins of this nature are still considered a unique occurrence in the integration arena, which makes this especially rewarding for us. As a result of this contract award, we have provided a complete design and build team to manage the entire project from start to finish. This project has been extremely successful, allowing the Colorado Springs Utility to better enhance the security, safety and overall effectiveness of its facilities."

About Stanley Security Solutions

Stanley Security Solutions, a business division of The Stanley Works, is a provider of access and security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.
