**STANLEY SECURITY SOLUTIONS ENABLES NETWORK INTEGRATION OF ITS HBV400 VIDEO MANAGEMENT SOLUTION WITH LENEL SOFTWARE**

***Creates Platform for Simplified, Software Driven Monitoring and Access Control***

**Indianapolis, IN – February 13, 2006** – Stanley Intivid, a division of Stanley Security Solutions, a provider of access control and integrated security solutions, today announced its HBV400™ video management solution can now be integrated with Lenel's OnGuard® software and B.A.S.I.S.® software, the private labeled Stanley® access control system that offers an offline lock capability. The network integration capability significantly extends the power of Stanley's HBV400™ digital video system and provides end-users with a totally integrated access control and video management solution.

Stanley's HBV400™ system, in conjunction with Lenel's OnGuard® software, is an efficient tool in recording and retrieving video of alarms or events. The HBV400™ system records in a time-lapse mode and according to a time-lapse and motion detection schedule. When an alarm or event occurs, the system can request the video being recorded by the HBV400™ system. Via the graphic user interface (GUI), end users can select the specific event from the OnGuard® main alarm monitor screen and retrieve the corresponding recorded video according to the start and end times saved in the Lenel OnGuard® event database. This feature provides increased efficiency when multiple cameras are incorporated into the architecture.

Moreover, because the digital video system is continuously recording, the new system allows users to quickly and easily scroll through hours of video in order to access and view pre-alarm information as well as pinpoint specific event information. Additionally, this action can also be executed based on several other factors including time parameters, location and motion detection.

"The integration of Stanley's HBV400 system with OnGuard® software creates an enhanced and uniquely powerful monitoring platform that leverages the latest access control software from Lenel," said Jay Vaitkus, product and market manager for Stanley Security Solutions. "As a result, end users are now able to further harness the robust functionality of the HBV400™ digital video system. Based on the HBV400™ system's ability to directly interface and 'speak' to the access control module, the integrated system not only provides a simplified and more efficient video surveillance platform but a more advanced access control solution overall."

**Additional Features**

The main alarm monitoring window enables the user to perform a variety of follow up actions including the ability to send an email or trace and filter an event. Users can also launch live video when motion is detected. In addition, users can utilize the Motion Restored feature which then plays back the motion that triggered the video recording. Users can also launch live video from a mapped camera on the Video Map.

The OnGuard® Video Viewer allows direct access to the HBV400™ system. Users can control minute camera functions, including live video zoom and playback speeds of recorded images. The multiplexer display feature allows multiple images to be viewed simultaneously and is further enhanced as each individual camera recording can be played back at various speeds. In addition, users can select the start and end time of recorded images and motion detection can be indicated through a camera highlight.

**About Stanley Security Solution**

Stanley Security Solutions, a business division of The Stanley Works, is a provider of access and security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.

Lenel and OnGuard are registered trademarks of Lenel Systems International, Inc.
