STANLEY SECURITY SOLUTIONS ADDS RECESSED PANIC HARDWARE OPTION TO SUITE OF DOOR ACCESSORIES

***New Panic Device Extends Design and Installation Options and Provides For
Easy Access in Emergency Egress Situations***

Indianapolis, IN. – April 6, 2005– Stanley Security Solutions, Inc. today added a new layer of safety and functionality to its line of Dura Glide® and Dura Guard™ automatic sliding door series with the introduction of its Recessed Panic Hardware device.

Specially designed with the architecture community in mind, this nationally and locally code compliant hardware option provides a flexible emergency egress breakout and access control solution ideal for use in a wide range of commercial, retail and office buildings and facilities. With the introduction of this panic hardware, customers are now afforded a broader selection of options when designing emergency egress solutions.

The Recessed Panic Hardware device provides an alternative to the panic paddle and panic bar currently available for this product line. The new device features a flush, sleek design scheme that easily integrates into the muntin bar contained within most door structures. In addition to strengthening the door, the integrated configuration provides an unobtrusive and visually pleasing appearance, allowing architects to maintain critical sight lines.

The Recessed Panic Hardware also functions as an added security measure when combined with the access control component. This additional capability combines a solenoid lock that mounts inside the door header to secure the door. As a result, the lock can only be released using an access control key, preventing unwanted intrusions and security breaches.

When the panic hardware is not in use, the door itself is able to continue to slide open to its fullest extent, facilitating the flow of traffic in and out of a facility. The

panic bar also extends for more than half the door width, providing for easy accessibility in emergency egress situations.

“The value and benefit from this new panic hardware device is realized in its sleek, elegant design that fits well into the door package,” said Thom Cordeiro, product marketing manager at Stanley Security Solutions. “With several color variations that match with the door, it offers customers an improved way of providing emergency egress, which includes the invaluable feature of choice.”

Recessed Panic Hardware Features and Options:

- ANSI/BHMA Grade 1
- U.L. listed for panic hardware
- Complies with national and local codes
- Patented top latching mechanism interlocks door frame
- Integrated into customized 4 ¼” muntin bar
- Compatible with Dura-Glide 2000/3000/5200/5300
- Compatible with Dura-Guard 2000/3000
- Accommodates panel widths from 16” to 54”
- Available in both clear anodize and dark bronze anodize

Availability

Recessed Panic Hardware option is available through Stanley Access Technologies branch or distributor locations throughout the U.S. For more information, please visit us at www.stanleysecuritysolutions.com.

About Stanley Security Solutions

Stanley Security Solutions, a business division of The Stanley Works, is a provider of access and security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.
