STANLEY SECURITY SOLUTIONS GOES WIRELESS

Newest Wireless Single Door Controller Locking System Provides “Game Changing” Approach to Locking System-Based Security

Las Vegas NV (ASIS Show) – September 24, 2007 – Stanley Security Solutions, Inc., a provider of integrated access control and security solutions, today further illustrated its ongoing commitment to innovation in the security industry with the introduction of its newest security solution, the Wireless Single Door Controller.

The Wireless Single Door Controller was specifically designed to provide a wireless online upgrade for Stanley® B.A.S.I.S.® software off-line door readers. In addition, the Wireless Single Door Controller can serve in a retrofit upgrade capacity, allowing users to migrate from older technology controllers while still retaining existing door infrastructure.

The retrofit capability of the wireless controller enables the users to convert their Wiegand-based readers to a wireless technology. For additional value and convenience, the controller uses the existing wiring and power at the door and requires no dedicated controllers. In addition, all the intelligence and decisions are made at the door. As a result, users can leverage their standard hardware and upgrade to an online wireless system, creating a more powerful and cost-effective solution.

“The introduction of the Wireless Single Door Controller represents a new dimension in the Stanley Security Solutions suite of security systems,” said Bill Merrill for Stanley Security Solutions. “The Wireless Single Door Controller provides a unique benefit for end users, allowing them to maximize their existing

hardware and move up to an online wireless solution. Its value is realized in its cost effectiveness and flexibility.”

The Wireless Single Door Closer picks up all the hardwired inputs (RQE, DSM DLS) and enables key override for mortise applications. The system supports up to 65,000 card holders in up to 172 Time Zones as well as holidays, variable shunt times and is also ADA-compatible.

In addition, there is no need to run conduit, EMT or access Plenum ceilings. Install times are greatly reduced and challenging installations become easy, using any standard Wiegand-compatible reader. Outdoor applications readers can be mounted at gates and parking entrances without the need for any traditional trenching and wire runs.

About Stanley Security Solutions

Stanley Security Solutions, a business division of The Stanley Works, is a provider of integrated access control and security solutions for institutional, commercial and industrial businesses and organizations. With a strong emphasis on service, Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems directly to end user customers. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad and extensive array of solutions that span the entire security spectrum.
