STANLEY SECURITY SOLUTIONS UPGRADES THE VIP™ VIDEO MANAGEMENT SOLUTION

A Scalable, Enterprise Level Digital Video Recorder, VIP X Sets a New Standard in Cost Effectiveness, Flexibility and Performance

Indianapolis, IN – Stanley Security Products, a business division of the Stanley Security Solutions Group distributes access control and video surveillance solutions through a network of authorized dealers, today announced an upgrade to the well-established VIP® video management system with VIP X. VIP X is a scalable, enterprise level digital video recorder (DVR) that sets a new standard in cost effectiveness, flexibility and performance.

VIP X is designed to integrate seamlessly with existing closed circuit television (CCTV) components as well as third-party transaction systems, such as automated teller machines, point-of-sale systems, alarm panels and access control systems. The functionality of existing components are extended through integration to the enterprise network. As a result, the existing CCTV investment is protected and end users are able to take full advantage of technological advancements in IT and video surveillance equipment.

“End users are always looking to implement the most cutting edge technology solutions on the market,” said Adrian Dobrisan, global product line manager at Stanley Security Solutions. “VIP X allows the end user to upgrade, rather than replace, their system with the technology that addresses their unique needs over time, making this product uniquely powerful, versatile and cost effective.”

The modular design and network distributed architecture of VIP X provides a system that easily adapts to customer needs over time. In fact, VIP X can handle multiple cameras on a single DVRs and NVRs to hundreds of cameras on

multiple DVRs and NVRs. Multiple systems are seamlessly consolidated in a single enterprise wide solution for viewing, querying and configuration purposes.

Additionally, a choice of video compression enables end-users to optimize their storage requirements depending on their specific application. The system also provides remote access to recorded and live video via a point-and-click Windows interface and supports both analog and IP cameras.

The upgraded VIP X also includes the following new features:

- Multiple server consolidation
- IP Distributed architecture
- Remote administration from central location
- Multiple display support with display profiles
- Support for comprehensive range of resolutions
- Support for mega-pixel cameras
- Extended list of supported IP cameras and encoders
- Choice of video compression (JPEG/MPEG-4)
- Extended internal storage capacity (up to 6TB per unit)
- Selective redundant archiving
- Pre-motion recording
- Runs as a windows service, so that the system does not have to be logged on to Windows to run, thus avoiding "auto" log on issues

About Stanley Security Products

Stanley Security Products is part of the Stanley Security Solutions Group, a business division of The Stanley Works, and is the sales channel for all products that are supplied through resellers and installers.
