

NIMBUS™ Cloud Video Solution

Secure, Convenient, and Cost Effective
Video Surveillance as a Service (VSaaS)

NIMBUS™ is a VSaaS "Video Surveillance as a Service" solution integrating industry-leading IP cameras with cloud video features and storage. With minimal infrastructure investment, easy installation, and intuitive navigation, NIMBUS allows commercial companies and small businesses to easily implement cloud video and view live footage for one or several locations from your laptop and iOS or Android mobile device.

- ▶ Video securely encrypted and stored in the cloud
- ▶ Ability to view live or recorded video and download video clips with audio
- ▶ Set camera schedules for motion or continuous recording
- ▶ Alerts when motion is detected on your cameras
- ▶ Support for camera alarm inputs and outputs
- ▶ Notifications of bandwidth disruption or camera disconnection
- ▶ Create labels and filter video feeds by location to quickly and easily view key areas
- ▶ Supports SD RAM storage on cameras or a local NAS (Network Attached Storage) device
- ▶ Manage users and grant access by camera label assignment

Secure Cloud Storage

Encrypted, secure live video is streamed and stored within highly secure data centers, typically regulated by stringent federal security mandates and privacy guidelines, for cloud storage subscriptions of 7 to 90 days. In addition, cloud-based video management systems do not carry the same types of cyber security risks of traditional DVR, or NVR systems, making them less vulnerable to cyber-attacks.

Accessible Live Viewing

NIMBUS™ is a scalable solution, handling video cloud storage for multiple IP cameras from one or more business locations. Both the user-friendly web-based platform and powerful mobile app allow you to view and access your video streams and recordings quickly and efficiently. You can even perform administrative tasks including adding guest users, adding cameras, turning on/off motion detection, and adding schedules from the mobile app.

Cost Effective Investment

Straightforward camera set up and plug and play installation results in reduced upfront labor costs, making cloud video an affordable option. Without the need for on-site video management and storage, your initial investment and ongoing maintenance costs are minimized. Plus, IP video cameras have lower power consumption than on premise video systems resulting in further savings.
