“HE JUST AIMED HIS GUN AT US AND FIRED.” A chilling account, yet one that has become more and more familiar in today’s professional environment. The Federal Bureau of Investigation analyzed 160 active shooter incidents from 2000 through 2013. Of those, more than two-thirds happened at businesses or schools. While corporations continue to invest in the latest technology designed to protect against virtual security breaches, many now understand the need to provide state-of-the-art solutions designed with the goal of providing physical security against the active shooter threat. According to updated FBI statistics, 2014-2015 had the most active shooter incidents ever in a two-year period, making the rising active shooter threat a priority that businesses cannot afford to ignore.

Experts have stated that in the majority of active shooter incidents, the time required for security teams and law enforcement officials to respond is what can make the difference between life and death. Shooter Detection Systems (SDS), the world leader in gunshot detection, was formed to help mitigate these risks by providing the most advanced active shooter detection and alerting technology available today.

The Guardian Indoor Active Shooter Detection System was developed from the world’s most accurate and widely used shooter detection system, Boomerang. Developed in conjunction with the Defense Advanced Research Projects Agency (DARPA), Guardian is the most widely installed indoor active shooter detection system, actively deployed in real-world environments nationwide with zero false alerts.

This cost-effective system is easily installed into your existing building infrastructure and was designed for integration and compatibility with leading-edge security systems such as access control, alarm panels, video surveillance, mass notification, mobile application technologies and other notification pathways.

With Guardian sensors installed throughout your corporate campus, government or private building, this critical information can be relayed to the building’s occupants—as well as emergency personnel outside—so that the proper steps can be taken to quickly control the situation. By removing the “human factor”, nothing is left to interpretation and life-threatening delays can be avoided.
Guardian offers seamless integration into your facility's existing security systems and represents an affordable way to protect your staff and visitors from acts of gun violence so you can focus your time and resources on the goals of your business.
