

## Managed Service Provider

### Protect Your Network

#### Fully Managed Network Security Solutions

STANLEY Security knows network security is a critically important job, and it takes a team of trained experts to manage the process. As a business owner, your time and resources should be spent staffing your profit centers. That's why STANLEY Security protects your most common intrusion point: your network.

STANLEY Security offers a fully managed network solution. Protect your information and the sensitive information of your customers with a trusted service from a company that knows security, so you can focus on what matters – growing your business.

#### Services and Support You Can Trust

STANLEY Security's partnership with Cisco Meraki involves deployment, configuration and monitoring of the platform, which provides better visibility into the threats to your business in real-time. STANLEY Security fully manages this layer of protection while providing you the necessary information to adjust and maintain current network protocols, including:

- ➔ Regularly scheduled reports that show data on network, application and WAN link performance
- ➔ Alerts in real-time if action is required
- ➔ Support from STANLEY's world-class Network Operations Center (NOC)

#### Network Protection By the Numbers\*

**200 BILLION**

Malicious emails are blocked each day

**17 BILLION**

Web requests are inspected each day

**1.5 MILLION+**

Malicious software samples are collected and analyzed each day

\*Cisco

Access to the NOC means having expert professionals there to support you.

- ➔ **Configure your system to work best for your business**
- ➔ **Be available to update your network as your business changes**
- ➔ **Remote support when problems arise with your network**
- ➔ **Serve as your network expert so you can focus on your business**

## Solving Your Everyday Network Challenges

- **Does your internet connection slow down considerably with guests in your building?** STANLEY Security can create a separate guest network that can be throttled.
- **Are your employees streaming Netflix during the day and slowing down your bandwidth?** STANLEY Security can report and block specific network traffic that doesn't directly relate to your business.
- **Are network issues causing drops in productivity for your employees while you're out of town?** STANLEY Security can remotely troubleshoot the issues by analyzing network speed and traffic.
- **Having trouble managing network traffic for multiple locations?** STANLEY Security can manage each location with a standard set of rules or establish custom settings per location as needed.

## Do More Than Protect

When you're juggling today's demands and challenges, there's simply no time to learn all about network security. Let us help you do more than protect your network from attacks – stay in control of traffic and bandwidth to make sure you have the right amount of network access when you need it.

**STANLEY Security's team of experts is your single source for protecting your network 24 hours a day, 7 days a week, 365 days a year.**
